

Operations & Compliance Management System

Enterprise User Manual & Operational Governance Guide

Document Version:	v3.5 (Enterprise Glass Edition)
System Scope:	Station Daily Audits, Station Opening Governance, Admin Hub
Target Audience:	Super Admins, Operations Supervisors, Accountants, Account Managers, Management
Effective Date:	August 2026
Organization:	Al Noor United Transport Est. (██)

Notice of Confidentiality: This document contains proprietary information and operational protocols for Al Noor United Transport Est. Unauthorized reproduction, distribution, or alteration is strictly prohibited.

1. Executive Summary & System Architecture

The **Operations & Compliance Management System** is an enterprise web platform engineered for fuel station auditing, compliance verification, and operational governance across all Al Noor United transport stations.

The platform features real-time financial reconciliation, automated nozzle revenue calculations, multi-stage digital approval workflows, handwritten signature captures, and detailed PDF report generation.

Role-Based Access Control (RBAC) Hierarchy

User Role	Primary Responsibilities	System Module Permissions
Super Admin	System administration, user account management, station registry, global fuel prices, system logs.	Full Access to Admin Hub, Station Audit, Station Opening, Reports, System Settings.
Operation Supervisor	Creation & initial submission of Station Daily Audits; submission of Station Opening forms.	Audit Form creation/editing, Station Opening submission, View Station Audits.
Accountant	Financial auditing, cash reconciliation, verification of meter sales vs cash received & bank deposits.	Review & sign Station Audits at Accountant stage; return audits for correction.
Account Manager	Secondary financial review, bank deposit clearance, variance approval & discrepancy sign-off.	Review & sign Station Audits at Account Manager stage.
Management Executive	Final executive approval, governance clearance, locking completed audits.	Final Sign-off on Station Audits; Full executive oversight dashboard.

2. Module 1: Station Daily Audit Suite

The Station Daily Audit module automates end-of-day sales reconciliation for fuel pumps (Petrol 91, Petrol 95, Diesel), oil sales, tank deliveries, and petty cash expenses.

Key Workflow Steps:

- **1. Fuel Metered Sales:** Input opening and closing meter readings for each nozzle. The system calculates quantity in Liters and total revenue (SAR) automatically based on standard fuel unit prices.
- **2. Cash & Electronic Collection Log:** Input cash collected, Mada/POS card payments, bank transfer slips, and credit customer vouchers.
- **3. Net Discrepancy Calculation:** The system calculates $\text{Net Discrepancy} = \text{Total Cash/Card Received} - \text{Expected Sales Revenue}$. Shortages (< 0 SAR) are highlighted in red; surplus (> 0 SAR) in green.
- **4. Sequential Approval Chain:** Initiates a 4-tier signature sign-off: Operation Supervisor → Accountant → Account Manager → Management Executive.

Sequential Approval Workflow Matrix

Approval Stage	Current Status Key	Action Allowed	Sequential Chain Visibility
1. Creation	draft / submitted	Supervisor fills metrics & submits to Accountant	Visible (Step 1 Active)
2. Accountant	pending_accountant	Accountant signs or returns for correction	Visible (Step 2 Active)
3. Account Manager	pending_account_manager	Account Manager reviews bank slips & signs	Visible (Step 3 Active)
4. Management Exec	pending_management	Management Executive provides final sign-off	Visible (Step 4 Active)
5. Final Approved	approved	Audit locked; official PDF export generated	Hidden Automatically

3. Module 2: Station Opening & Inspection Suite

The Station Opening module manages comprehensive safety, technical, and regulatory inspections required prior to launching or re-commissioning a transport fuel station.

Multistage Inspection Governance:

- **Safety & Quality Control Check:** Verification of fire extinguishers, emergency shutoff valves, vapor recovery units, and civil safety signage.
- **Document Controller Verification:** Review of civil defense licenses, municipality permits, commercial registration (CR), and environmental certificates.
- **Engineering Inspection:** Underground storage tank (UST) tightness testing, ATG calibration, electrical wiring, and dispenser flow rate validation.
- **Al Noor Management Sign-Off:** Final executive authorization to open station for public operations.

4. Module 3: Admin Hub & Governance Control

The Admin Hub provides centralized management for system parameters, station registries, user provisioning, and security audit logs.

Admin Section	Description & Operations
Dashboard	Overview metrics including active stations, registered users, pending audit approvals, and security alerts.
Station Registry	Register new stations, update city/location, configure pump nozzle IDs, set assigned supervisors.
User Management	Create user accounts, set employee IDs, assign RBAC roles, assign default stations, reset passwords.
Audits Overview	Global audit repository search, filter by station/status, mass PDF export, audit deletion controls.
System Activity Logs	Immutable security audit trail tracking user logins, audit sign-offs, price edits, and profile updates.
System Settings	Set global default fuel prices (SAR/Liter for Petrol 91, 95, Diesel), session timeouts, and company branding.

5. Troubleshooting & Frequently Asked Questions

Q: Why is the Sequential Approval Chain missing on an audit details page?

A: The Sequential Approval Chain automatically hides once an audit reaches 'Approved' status. The final approval process is complete, and the audit is locked. Signatures remain visible in the Signatory Authorization section.

Q: How do I correct a discrepancy error on a submitted audit?

A: An Accountant or Account Manager can click 'Return for Correction' with review comments. The audit status changes to 'returned_for_correction', allowing the Operation Supervisor to edit and resubmit.

Q: Can audit PDF reports be generated before final approval?

A: Yes, PDF reports can be exported at any time from the Audit List table or the Audit Details view by clicking the PDF Export icon.
